ABERDEEN INTERNATIONAL BUSINESS PARK

ABERDEEN

Bourne Parking was engaged by Bowmer and Kirkland to design and construct an 'above ground' scope of works for this single deck car park supplying a total of 581 spaces.

Bourne Parking delivered the above ground scope of works, with the superstructure incorporating a galvanised steel frame and Bourne Parking's Bournedeck flooring technology, crash barrier system, asphalt waterproofing and a perimeter planting system.
Bourne integrated the planting wall into the design with cantilever brackets on the structural frame, then supporting stainless steel wires carried the pre-grown modular planting system running from ground to the top of the upper handrail.
Work was completed in challenging weather conditions in just 16 weeks.

Market Sector:	Commercial
Client:	Abstract
Main Contractor:	Bowmer & Kirkland
Spaces:	581
