

## PEACEHAVEN WASTEWATER TREATMENT WORKS EAST SUSSEX

Peacehaven Waste Water Treatment Works is a £300m environmental scheme, developed to bring cleaner seas to the Sussex coastline.

Bourne Steel designed, supplied, fabricated and erected the project's structural steelwork.

The structure is covered by a parabolic roof, rising to a maximum height of 18m and dipping down to a height of 14m. The shape of the roof is not just an architectural feature - it is also covered with an intensive green roof, the largest of its kind in the UK.

Market Sector: Water  
Client: Southern Water  
Engineer: MWH  
Main Contractor: 4D Delivery
